

Please read these instructions carefully. Faulty parts which are under warranty should be returned.

FITTING INSTRUCTIONS - MOTOR SPEED CONTROL UNIT (MSCU) UKKIT26

1. Remove the four battery tray retaining screws, located under the tray, two either side of the motor. Note the two metal strips inside the battery tray which will become loose when the screws are undone.
2. Pull the connectors in the blue and brown wires apart - these are located behind the tray, held in position by cable clips.
3. Pull apart the other plug also located under the tray, on the other side of the motor. Again this is held in position by cable clips.
4. With the old unit removed transfer the battery retaining strap to the new assembly.
5. Reconnect the blue and brown wires to the new unit and lay the battery tray in position on the motor, ensuring the wires are not trapped.
6. Refit the tray retaining screws. They should be done up evenly - do not over tighten them.
7. Reconnect the remaining plug and clip the leads attached to it to the underside of the battery tray.

Note: If, when the trolley is turned on the motor runs but the wheels do not drive, the blue and brown wires need to be reversed.
